E CIÊNCIAS ATMOSFÉRICAS

São Paulo, 22nd March 2019

Sao Paulo School of Advanced Science on Atmospheric Aerosols

To whom it may concern,

I am an assistant professor of the Institute of Astronomy, Geophysics and Atmospheric Sciences at University of São Paulo since 2009, where I have also made my undergraduate and graduate courses. My Curriculum Vitae is available in the following electronic address: http://lattes.cnpq.br/0733149694952132.

I am pleased to write you on behalf of Dr. Sergio Ibarra. I was his supervisor during his doctorate course, from 2013 to 2017. Dr. Sergio Ibarra is a highly motivated researcher. He has been working with vehicular emissions inventory since 2010. During his PhD he started to develop an R package called VEIN, which generates vehicular emission with high temporal and spatial resolutions. VEIN also outputs the following characteristics of particulate matter: active surface; number of particles with diameter smaller than 50 nm, between 50 and 100 nm, between 100 and 1000 nm; black carbon; organic matter; as well as other 120 pollutants, which are important in the study of aerosols. The participation of Sergio in this school would help him to better understand the impacts of aerosols in the atmosphere and apply this knowledge in future developments of VEIN model. Therefore, I highly recommend him.

Feel free to contact me if you require further information. Sincerely,

Prof. Dr. Rita Yuri Ynoue
